**Notes:**

\*In these countries sales are measured in kg, the conversion factor depends on the normal density of gaseous natural gas in each country. The default value used is 0.73 kg/Nm<sup>3</sup>.

**Notes:**

Calculations in this table are based on the ratio between CNG and the respective other fuels. The energy content of each fuel has been considered.

**Default values used**

CH<sub>4</sub> content in natural gas is 97%  
 CNG energy content is 9.6 kWh/Nm<sup>3</sup>  
 Gasoline energy content is 8.6 kWh/litre  
 Diesel energy content is 9.85 kWh/litre
